

# Center for International Development

## Bulk Data Downloads for The Atlas of Economic Complexity

This is a bulk-download repository of the trade data used in the [Atlas of Economic Complexity](#). These are relatively large files, so please be respectful of our bandwidth costs and download only as much as you need.

The files are organized into two sections. "CPY" represents "Country-Product-Year" data, where each row represents something like "Germany exported 5 million dollars worth of cars." The "CCPY" files are broken down further by the destination of each product.

The data is also provided in two different classification systems, H0 representing the Harmonized System (revision 1992) and S2 representing the Standardized International Trade Classification (revision 2). The H0 data benefits from a more detailed list of products, but is only available from 1995, whereas S2 has a much less detailed list of products, but is available from 1962.

The files are provided in STATA 14 format, which is readable by STATA or by various open source tools, such as python/pandas' `read_stata` function or R's confusingly named `readstata13` package.

For detailed information on methodology, please see our [data page](#) on the Atlas of Economic Complexity.
